

# Project Highlights ( System Architecture for the Vessels)

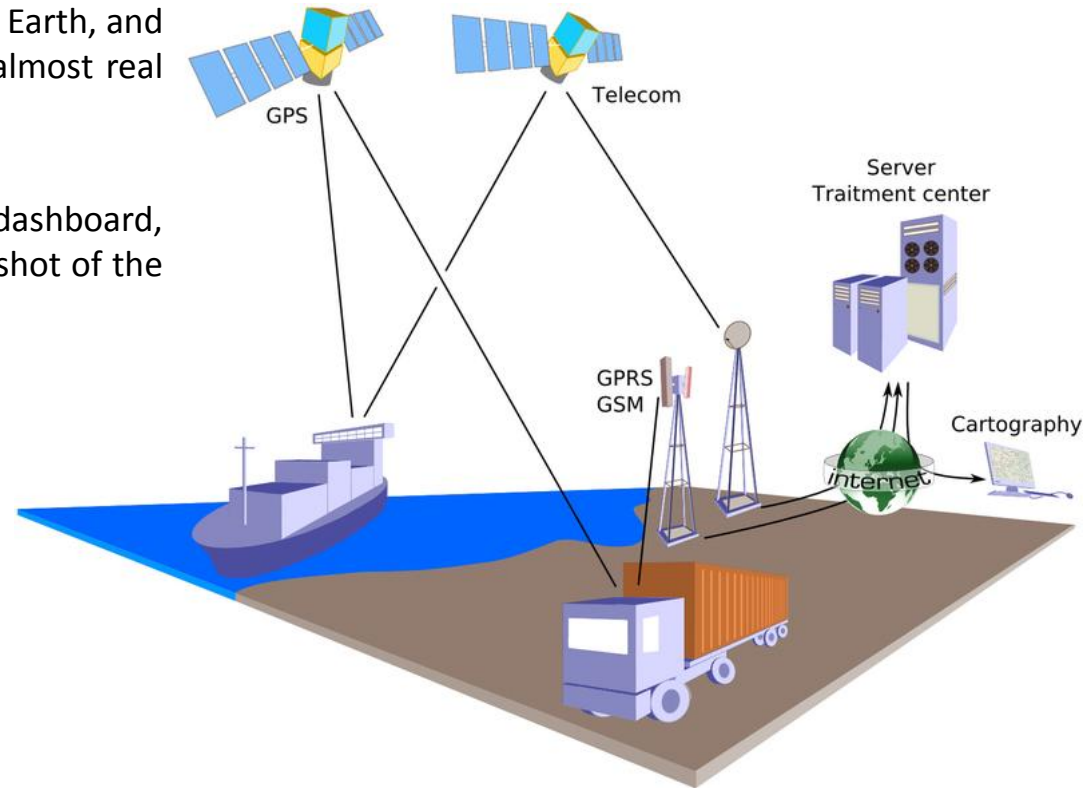

INTERNAL USE ONLY

# System Description

Owners and operators can use the vessel tracking capability to monitor the position of their ships with Google Earth, and to monitor ship speed and fuel consumption in almost real time.

Through the remote monitoring via the online dashboard, shore based technical staff are able to see a snapshot of the below data across the fleet.

- Tracking of Vessels
- Real time data of Production
- Fuel flow consumption
- Power Consumption \ Unit Generation
- Historical data
- Alarms & Events
- Cutter Angle \ Production efficiency \ Target
