With a history stretching back over 180 years, Wärtsilä is a world class expert in the manufacture of shaft line solutions for the marine environment. We offer a complete package of solutions whatever your destination.

**Future proof solutions for yachts**
As the chief engineer of a yacht the last thing you want to worry about is breakdowns caused by a component fault on the propeller shaft line. Thanks to our years of expertise in the marine industry, Wärtsilä offers a complete range of shaft line components for your vessel that work in perfect harmony, giving you peace of mind and a smooth journey. We are one of the very few suppliers who manufacture all the components required within the shaft line in-house, which means we offer a true ‘one-stop-shop’ service. Meanwhile our global presence means we can deliver our service expertise wherever your journey takes you.

The Wärtsilä propulsion shaft line portfolio offers a range of viable solutions that are fully compliant with all the environmental regulation standards. Our package of water lubricated shaft line solutions covers the full scope of products including seals, bearings, stern tube and condition monitoring systems.

**Wärtsilä Sea-Master. Future proof your performance and compliance**
Our innovative Wärtsilä Sea-Master system lets you monitor the parts along your shaft line so you can prove that they are wearing at a predicted rate. You can use this evidence to avoid the standard five-yearly docking to expose the tail shaft. That keeps you in the water for longer, and cuts costs too.

With remote digital monitoring along the shaft line, Wärtsilä Sea-Master also triggers an alarm if there is any unexpected changes to the operating conditions.

So you can stay safe and take proactive action to repair any problems before they become an issue.
A complete package of solutions
Wärtsilä products and services help to maximize efficiency and minimize operational risks, at the lowest lifecycle cost. Our water lubricated solution portfolio is designed to keep your yacht running smoothly, even in the most challenging environments.

Superior build quality
Wärtsilä offers superior quality products that offer true value for the whole life of the vessel. We are a major supplier to the naval market, and supply seals to nuclear submarines, icebreakers, cruise vessels and merchant vessels. We know how to meet the most rigorous standards, and we bring the same levels of quality processes to our yacht portfolio.

By lasting longer, our seals and bearings prevent expensive emergency dockings and downtime, and avoiding leakages and the associated costs.

• We are experts in designing solutions for the world's largest and most complex luxury vessels, and know how to ensure smooth operation at all times
• As we offer a complete product portfolio, you know we can always offer the solution you need
• Increasing environmental legislation heightens the need for highly reliable seals – we understand the global and local legislation and can supply parts that meet the highest standards of reliability

True ‘Fit & Forget’ solutions
Your schedules are tight and there can be no delays. Our global presence means we can deliver spare parts and service extremely quickly, minimizing downtime and associated costs.

• We are the Original Equipment Manufacturer for every major component included within our shaft line packages. This means every part of the assembly is designed to work in perfect harmony with each other
• Installation and alignment is a simple procedure, allowing for significant savings in installation time and resources
• Solutions are fully compliant with all environmental legislation, including Vessel General Permit (VGP), so you can sail with confidence
• Our global stock and service engineer network means we can support you and your vessel in any location

Delivering lifecycle efficiency
You want parts that last for longer at the right price. Wärtsilä offers a higher standard of technologically advanced products that offer a longer service life to drive efficiency.

• Market leading wear resistance on seals and bearings gives longer life expectancy for key parts
• We are constantly developing products to improve the durability and longevity of our solutions
